

15 Ways to Protect Yourself from a Cyber Attack!

DID YOU KNOW?

1 in 5 small businesses will suffer a cyber breach this year.

81% of all breaches happen to small and medium sized businesses.

97% of breaches could have been prevented with today's technology.

<input type="checkbox"/>  <p>Security Assessment It's important to establish a baseline and close existing vulnerabilities. When was your last assessment? Date: _____</p>	<input type="checkbox"/>  <p>Spam Email Secure your email. Most attacks originate in your email. We'll help you choose a service designed to reduce spam and your exposure to attacks on your staff via email.</p>	<input type="checkbox"/>  <p>Passwords Apply security policies on your network. Examples: Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts, and limit user access.</p>
<input type="checkbox"/>  <p>Security Awareness Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.</p>	<input type="checkbox"/>  <p>Backup Backup local. Backup to the cloud. Have an offine backup for each month of the year. Test your backups often. And if you aren't convinced your backups are working properly, call us ASAP.</p>	<input type="checkbox"/>  <p>Advanced Endpoint Security Protect your computers and data from malware, viruses, and cyber attacks with advanced endpoint security. Today's latest technology (which replaces your outdated anti-virus solution) protects against file-less and script based threats and can even rollback a ransomware attack.</p>
<input type="checkbox"/>  <p>Multi-Factor Authentication Utilize Multi-Factor Authentication whenever you can including on your network, banking websites, and even social media. It adds an additional layer of protection to ensure that even if your password does get stolen, your data stays protected.</p>	<input type="checkbox"/>  <p>Computer Updates Keep Microsoft, Adobe, and Java products updated for better security. We provide a "critical update" service via automation to protect your computers from the latest known attacks.</p>	<input type="checkbox"/>  <p>Dark Web Research Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach. We scan the Dark Web and take action to protect your business from stolen credentials that have been posted for sale.</p>
<input type="checkbox"/>  <p>SIEM/Log Management (Security Incident & Event Management) Uses big data engines to review all event and security logs from all covered devices to protect against advanced threats and to meet compliance requirements.</p>	<input type="checkbox"/>  <p>Web Gateway Security Internet security is a race against time. Cloud based security detects web and email threats as they emerge on the internet, and blocks them on your network within seconds - before they reach the user.</p>	<input type="checkbox"/>  <p>Mobile Device Security Today's cyber criminals attempt to steal data or access your network by way of your employees' phones and tablets. They're counting on you to neglect this piece of the puzzle. Mobile device security closes this gap.</p>
<input type="checkbox"/>  <p>Firewall Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM. And if your IT team doesn't know what these things are, call us today!</p>	<input type="checkbox"/>  <p>Encryption Whenever possible, the goal is to encrypt files at rest, in motion (think email) and especially on mobile devices.</p>	<input type="checkbox"/>  <p>Cyber Security If all else fails, protect your income and business with cyber damage and recovery insurance policies.</p>
